Q4

HIGH PRIORITY

TECHNOLOGY
& DATA

**Did our technology
actually fix the
process, or did we just
digitise the old one?**

The question that leads the high-priority tier
from our ProcureCon 2026 roundtable

WHAT IT REALLY MEANS

Platforms bought on the promise of transformation often automate the same broken process at higher speed, so the mess simply arrives faster. Most data still isn't ready for the AI layered on top of it, sitting in disconnected systems with no shared definitions.

Analytics amplify whatever they're given. They don't repair it.

WHAT THE ROOM SAID

Procurement leaders' own topics, in their words.

Using AI to improve design, planning and POSM effectiveness.

Innovation & AI

AI to enhance the end-to-end process: vision and scope in place.

Future-fit tech

Central print, print-on-demand and in-store tech.

Store printing

Tooling for the risk and critical-supplier watching brief.

Risk management

AI, automation and analytics to work smarter.

AI & efficiency

DONE RIGHT

Fix the process and clean the data first. Then the technology compounds the gains, not the errors.
